**Spanish Menopause Society: For promoting translation of science into clinical practice... The “MenoGuías”**.

One of the main objectives of the Spanish Menopause Society (AEEM) is to transfer the wealth of scientific information that appears every day in recommendations for practitioners to implement them in the care of mature woman. Such guidelines are traditionally the result of consensus with other Societies or expert panels and represent attempts to synthesize —from the best available evidence and expertise— practical guidance on the best possible care. The emergence of "MenoGuías" of AEEM has favoured the spread and management of various conditions affecting women on midlife health and beyond.
