Objectives: The objective of this session is to review strategies for the safe performance of cholecystectomy and reduction of biliary injury.

After this session, attendees should be able to:
1. Describe risk factors for and strategies for dealing with the difficult cholecystectomy and mechanisms of biliary injury
2. Identify the critical view of safety and the role of biliary imaging in prevention of bile duct injury
3. Discuss how to recognize and manage a biliary injury should it occur during cholecystectomy

The mortality of pancreatectomy has diminished, but morbidity remains too high. Surgical site infections account for more than half of that morbidity (ACS-NSQIP HPB Collaborative). The AHPBA Clinical Trials Committee is developing a perspective, randomized trial to implement at ACS-NSQIP Pancreatectomy Procedure Targeted hospitals. To learn more about protocol development and participation, please join us for a luncheon planning meeting.
